

Re: Elimination of Artificial Nails

Please sign and return to Medstaff, Inc.

The facility at which you are being assigned has a policy for the elimination of artificial nails for Healthcare Professionals who come into physical contact with patients in the course of their work. This policy is a direct response to the mounting evidence that artificial nails have been linked to transmission of nosocomial infection and the facility's commitment to prevention of these infections. In order to be compliant with the requirements of this facility, all artificial nails must be removed prior to starting your assignment.

I have been informed of this policy and the requirement to eliminate artificial nails prior to starting this assignment.
